American Speed To Tour A Full-Fendered Speed 33 Convertible

Season kicks off in Knoxville

PLYMOUTH, Michigan – American Speed now stocks all the components needed to build a full-fendered Speed 33 convertible, the only steel '33 roadster with power windows and a folding top that disappears completely. The company's full-fendered demo car will be on tour throughout 2008, kicking off the season in Knoxville.

American Speed has been filling orders for its bodies and complete roller packages since last year. The all-steel convertible can be mounted on any original '33-'34 chassis, as well as the ones provided by the company.

The company's latest line of off-the-shelf components now includes hoods, grille shells, fenders, running boards, lights, bumpers, and interior parts. All the bodies come equipped with Haartz cloth tops, power windows, and a polished stainless windshield assembly.

About American Speed Company: Founded in 2006, American Speed Company is an automotive and product development company started by Industry design veteran, D. Mark Trostle. Headquartered in Plymouth, Mich., the company offers everything from personalized components to complete vehicle design.
